

Editor System

Any Web-enabled PC, running MS Internet Explorer can serve as the home office Editor System. The customer uses local ISP dial-up to access The Editor Software which resides on the C.O.W. servers. The software gives the customer complete control of look, feel and content.

Cable System

Display Units

Built by C.O.W. and loaded with an NTSC-compatible video card and special software, the display units reside at the site of the connection to the video cable network. They retrieve content from the C.O.W. servers via the Internet.

The Server(s)

Built by C.O.W., these Internet servers are loaded with proprietary software that includes the Editor software and the information content that is forwarded to the Display Units at regular intervals.
